PLEASE BRING THIS CATALOGUE TO THE SALE

DISCLAIMER

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents or representatives thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information on the animals included in this sale catalogue.

Welcome....

Well here it is... Bull Sale time again at Shannon Vale, home of the Dulverton Angus herd for the past twenty one years. Only seems like yesterday when Sal and I made the trek east from Moree, to the cooler, wetter Shannon Vale precinct. Managing Shannon Vale and it's soils to produce pastures enabling our Dulverton herd to express it's genetic potential has been as all encompassing and engrossing as our commitment to improving the genetic potential of the Herd. Interestingly, while we would like to lay some claim to the improvement re pasture production made over the past twelve months, I'm sure the largest contributor has been the 'Ole adage "Just Add Water". What a fantastic job "Huey" has done in rectifying the enormous deficit of '17, '18, & '19 in just eighteen months and all that so close to the devastation of the "Big Dry". No doubt the precipitation payback has caused in many situations as much pain and anxiety as the "Big Dry".

Environment, Management and Genes that's what it is all about for us.

It's opportune during this period of finalising decisions re the purchase of your next Spring's Sire Battery (the Genetic component), to keep in mind the fact that the genetic contribution to the ultimate expression of most trait lists is an average of thirty percent. Some traits e.g. Fertility and weight of calves at weaning are lower but others e.g. ADG, EMA, Fatness are higher. Marbling is 25 to 30%, heritable. Spare a thought for the contributions of the environment and management practices as they also contribute in a major way to the final outcome re the expression of the various trait lists being considered.

Bull Breeding is our business, has been for the past forty-one years, getting our bulls genetically superior and structurally sound, so they might pass on for our valued clients those traits of Economic importance, is our number one priority.

The Structural Soundness component is once again covered by our third-party independent assessor in Dick Whale, be sure to include this data to assist your selection process.

Ever since a youngster in Years 11 & 12 at High School I have been fascinated by Genetics, the frustrating bit for me has been the snail's pace progress regarding the location of the actual genes that control the expression of the economically important traits. To that end we have engaged the Igenity Beef Profile, not only is this Profile more Genomically derived/enhanced but also includes the all-important Traits of Heifer Pregnancy Rate, Stayability, Tenderness and Carcase measured Marbling. We are only too happy to assist you understand the Igenity Beef Profile and its application.

Must say Sal and I are super lucky, we do have the most amazing set of people who make up the Dynamic Dulverton Team, headed by Tim who is extremely competent with both Livestock (Sal's and my love) and Machines (Sal and I both dread machines and their operation/maintenance but concede we cannot operate without them). Tim puts in "above and beyond" and we sincerely thank him for that. Then there is Owie very much an Individual in his own right is Owie, and a talent with machines and their operation, loves his steer breeding and showing adds a valuable dimension to the Team. Sam, well, Sam is very much in the Sal n Chaps mould, has to have a vehicle to get to work, with his saddle, but that's as much as Sam wants to do with machines. Sam has a real talent with animals and a love for the equine, that works at Shannon Vale where the equine population seems to keep growing. Fiona, interestingly these Sale catalogues, E-Mail mail outs, Stockbook maintenance, Breedplan, Neogen data entry etc need someone with tenacity and a "we must get right" mentality, Fiona brings these traits to the office. Steph, O. K. someone has to handle my Facebooker photos and "quips" plus wwww "articles", that lucky person just happens to be Steph good thing she is a niece eh? Must mention Jane and Phil, Jane assists Sal with the "Housekeeping" and Phil, well where would the garden be without Phil? Thanks a million Team, your efforts are greatly appreciated.

We look forward to catching up Sale Day, Monday 25th July at 1.00pm.

Regards,

Chaps & Sal

HOW TO REGISTER with ELITE LIVESTOCK AUCTIONS

Welcome to the new age of selling livestock in Australia and "Happy Bidding"

-  1 Simply go to www.elitelivestockauctions.com.au using your desktop, laptop, iPad, iPhone or android device
-  2 Click on the "Sign Up" page / link
-  3 Create a bidding profile using the bidder registration page.
(You can either register as a livestock agent, company or private buyer.)
-  4 Agree to the Elite Livestock Auctions Terms & Conditions and the Selling Agents Sale Terms & Conditions as printed in the official Sale Catalogue
-  5 Click "Register"
-  6 You will then be notified by email that an account has been created
-  7 Once an account has been created you are all "Set to Bid"
-  8 Each auction can then be viewed by clicking "Live Auction" logo on the Elite Livestock Auctions website
-  9 Once you receive email notification that your account has been created please go to the sale you wish to bid at and click "Request to Bid"
-  10 The sale agents will then approve your application to bid and on the sale catalogue you will see "✓ Bid Request Approved"
-  11 On Sale day simply login, click "Enter Auction" on the catalogue page and you can start bidding.
(There is no need for software download)
-  12 At the completion of the auction, invoicing will be carried out as per your registration details by the Selling Agents.

SALE INFORMATION

Inspection

All stock will be penned at Shannon Vale Station from 10am Sale Day, or inspections can be arranged any time prior to the sale by appointment with the agents or vendors.

Insurance

Will be available on Sale Day, please speak to one of the Colin Say & Co representatives.

Rebate

2% rebate available to outside agents introducing potential purchasers in writing 24hrs prior to sale and settle for purchases within 7 days of receipt of invoice.

Morning Tea & Lunch

Provided from 10am Sale Day.

Health

All bulls catalogued have tested negative to Bovine Viral Diarrhoea Virus (BVDV) commonly called Pestivirus and have been vaccinated with Pestigard vaccine.

JBAS = 7

Vaccination Program:

All bulls have been inoculated with

- 7 in1 at weaning plus a booster in May 2022 - booster required May 2023.
- Vibriosis - booster given in March 2022 - booster required March 2023.
- Pestigard vaccination given in March 2022 – booster required March 2023.
- Selovin yearly injection administered May 2022.
- Oral Fasinex 240 administered May 2022.
- Cydectin Pour-on administered May 2022.

Fertility

All bulls have been semen tested by Ced Wise (B.V.Sc.) of Ced Wise Veterinary Services, Glen Aplin QLD. In June 2022 the secondary sex glands, penis and scrotal tone were inspected and assessed.

Structural Soundness

Structural assessment was carried out by Dick Whale. It has helped us significantly reduce “failures”, that is, bulls that for some structural fault have failed to complete a 3 to 4 year plus working life. Dicks assessment also assists you improve traits such as length, pastern angle, body capacity etc.

Transport

We are requesting that you allow us the opportunity to organise your transport and delivery.

We would prefer no deliveries to occur on Sale Day. The deliveries will commence from Wednesday 27th July 2022 (2 days after the sale). Please confirm your delivery details on your Buyers Instruction Slip and with Greg Chappell or a Colin Say & Co Agent.

Registration

All registered stock as stated in the catalogue are eligible for transfer at the vendor’s expense. Please ensure correct name, address and **PIC (Property Identification Code)** is printed on the Buyer’s Instruction Slip.

Notice to Buyers

All lots will be sold subject to the usual conditions governing auction sales.

“The Dulverton Guarantee”

All breeding cattle sold by Dulverton are fertile and structurally sound to the best of our knowledge. If an animal becomes infertile or breakdown due to reasons other than injury or misadventure, at any time in the next 12 months, we will provide you with a satisfactory replacement if available, or issue you with a credit equal to the purchase price less the salvage value. This credit may be used to purchase any animal at future Dulverton Sales. Any claims are to be accompanied by a certificate from a registered veterinarian. All vet costs are the responsibility of the purchaser.

COVID-19

This sale will be COVID-19 compliant to the guidance issued by NSW Health Authorities at the time.

Bidding

This sale will be interfaced with Elite Auctions, online bidding system.

Phone bidding is also available, contact Greg or Colin Say & Co for more information.

Genetic Type and Structural Assessment

All the bulls catalogued for this sale have been inspected and assessed on the Genetic Type and Structure system, by Dick Whale. They were all considered acceptable for soundness and muscling. If any potential buyers would like to discuss any of the bulls prior to the sale, please contact Dick on 0427 697 968.

Structural Soundness Traits:

Feet - Evaluation of front and rear feet, with 25 being ideal. Scores less than 25 exhibit some scissor claw in the feet. Scores greater than 25 are open clawed.

Rear Leg Set - Evaluation of rear leg structure with 25 being ideal. Scores greater than 25 tend towards being sickle hocked, less than 25 toward post legged.

Feet and Pasterns - Evaluation of the length and strength of pastern and foot angle. Scores greater than 25 indicate stronger pasterns with more depth of heel.

Descriptive Traits:

Stature - Evaluation of bulls for maturity pattern and frame size. A stature score of 25 is average. This score may be influenced by age of dam, nutrition, etc.

Capacity - Evaluation combines the depth of rib, spring of rib, and width of chest floor. Scores greater than 25 indicates a bull with larger capacity.

Body Length - Evaluation of body length from point of shoulder to pin bone. Scores greater than 25 indicate longer body length.

Muscle Score - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores :	25 = C muscle
	30 = C+
	35 = B-
	40 = B
	45 = B+

Doability - The ability of a bull to deposit fat in the fat depots, relative to their peers under a common management regime.

Sheath - To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive.

Scores:	5 = Excellent:	very tight, parallel with underline, very little navel.
	4 = Very Good:	tight, almost parallel with underline, slight navel.
	3 = Acceptable:	not so tight, angle increasing, some navel.
	2 = Undesirable:	pendulous, increased angle, navel very evident.
	1 = Very Undesirable:	very pendulous, too much angle, too much navel.

Hoofprint Catalogues

DEFINITIONS OF IGENITY DNA TABLE

MATERNAL TRAITS

BIRTH WEIGHT (BWT): Variation in birth weight a heifer or bull will pass along to its offspring. A higher score indicates greater genetic potential for heavier birth weight.

CALVING EASE DIRECT (CED): Percentage of unassisted births, indicating greater probability that a calf will be born unassisted out of a first calf heifer. The higher Igenity score will indicate a greater percentage increase in the calving ease direct.

CALVING EASE MATERNAL (CEM): The probability that a first calf heifer will calve unassisted. The higher Igenity score will indicate a greater percentage in the calving ease maternal.

DOCILITY (DOC): The animal's genetic potential to be calm or have calm offspring. The higher Igenity score will indicate a greater percentage of calves with acceptable disposition.

HEIFER PREGNANCY RATE (HPR/HPRG): A heifer's chance of conceiving over a normal breeding season. A higher value is desired.

MILK: Indicated as pounds of calf weaning weight affected by the milk production of a calf's dam. This is not a prediction of actual pounds of milk produced.

STAYABILITY (STAY): The chance a heifer will remain in the herd as a productive cow until at least six years of age. The higher Igenity score will indicate a greater percentage increase in stayability.

PERFORMANCE TRAITS

AVERAGE DAILY GAIN (ADG): Based on the pounds of gain per day. The Igenity score for ADG identifies an animal's genetic potential for post-weaning growth.

RESIDUAL FEED INTAKE (RFI): This measure is an indicator of feed efficiency. It is the difference in animal's daily consumption of feed to achieve the same level of daily gain. Lower RFI equals greater feed efficiency.

WEANING WEIGHT (WWT): Pounds at age of 205 days.

YEARLING WEIGHT (YWT): Pounds at age of 365 days.

CARCASE TRAITS

HOT CARCASS WEIGHT (HCW/CWT): Hot carcass weight is the hot or un-chilled weight of the carcass after slaughter and the removal of the head, hide, intestinal tract and internal organs.

FAT THICKNESS (FAT): Fat thickness is scored as depth of fat in inches over the rib eye muscle at the 12th rib. Higher thickness scores equate to a lower lean yield.

RIB EYE AREA (REA): Rib eye area estimates muscling in beef carcass, and it's measured inches of the rib eye at the 12th rib.

TENDERNESS (TEND/TNDR): Animal's genetic potential for carcass tenderness (measured by Warner-Bratzler shear force test). A higher Igenity score indicates greater tenderness.

USDA MARBLING (MARB/MRB): Marbling score indicates the degree of marbling in the rib eye at the 12th rib expressed in USDA marbling units.

Igenity Beef Genetic Effects Table																
Igenity Scores	Maternal Traits							Performance Traits				Carcass Traits				
	Birth Weight	Calving Ease Direct	Calving Ease Maternal	Docility	Heifer Pregnancy	Milk	Stayability	Average Daily Gain	Residual Feed Intake	Weaning Weight	Yearling Weight	Hot Carcass Weight	Fat Thickness	Ribeye Area	Tenderness	USDA Marbling Score

1	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0

Understanding 1 to 10 Igenity scoring: This chart allows you to cross reference the 1–10 Igenity scores for traits with their corresponding Molecular Breeding Values (MBV) or expected effects. This MBV is the prediction of how future progeny of an animal are expected to perform compared to the progeny of other profiled animals. *Higher scores are not necessarily better* – they just mean the animal has more genetic potential for that trait.

Purchaser: \$.....

The 'S' Offering....

They say, "All good things come to those who wait". In last year's catalogue remarking on our first draft of Yearlings to be offered I made mention of the fact that Steven Chase's Waitara Princeton P90 is a fine example of the C. P. Moe progeny and that we were eagerly awaiting his first progeny. Boy oh boy, just look what's happened... P90 has produced a chart stopping bottler in the form of Dulverton Secretariat 21S005 Lot 85, our only Grade 8 WOW!!! Not sure about you, but the Dulverton Team reckons it's been worth the wait.

Yearlings are a worthwhile inclusion in the Sale, they have many advantages:-

1. They only weigh 500 plus Kg's and so are great to use over yearling heifers (320-350kg), as they are less likely to injure the heifers. Working the Yearling will "Slow" their development to the point where, in most circumstances, it's possible to get the second season out of the Yearling Bull over heifers. Can expect the "used" yearling to weigh the same weight (750+) as the first season two year old.
2. After their first season, chances of "Surviving" subsequent seasons are greatly enhanced as they are lighter and more athletic/agile than their two year old mates weighing in excess of 750kg, and you can expect an additional couple of seasons from them. That is, they learn their 'Trade' at a younger age and do become 'Conditioned'.
3. As they are 'Conditioned' they can conceivably be mated to fifty (50) plus females in their second and subsequent joining seasons.

Sound to good to be true? Are there any "Hitches" regarding using Yearlings? Yes, there most definitely are:-

1. Nutrition must be adequate and of sufficient quality. The Yearling Bull, like his heifer counterpart is still growing so there is a "Work" plus growth nutritional need.
2. The Yearling (14 mth) needs to weigh 500kg to assist "Sexual Maturity" Scrotal 32 cm minimum.
3. To guarantee optimum subsequent "working life" the yearling should only be mated to twenty five (25) head in the first six (6) week season.

FACES FROM OUR 2022 SALE

FACES FROM OUR 2022 SALE

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVs)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.		
	CEDirs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.		
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.		
Growth	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.		
	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.		
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.		
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.		
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.		
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.		
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.		
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.		
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.		
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.		
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.		
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.		
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.		
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.		
Feed Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.		
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.		
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.		
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.		
Selection Indexes	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self-replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.		
	\$A-L	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self-replacing, grass and grain finishing beef production systems. The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.		

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia. To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

What is the Transfascman Angus Cattle Evaluation?

The Transfascman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The Transfascman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The Transfascman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The Transfascman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN[®] beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

TACE 
 TransTasman Angus Cattle Evaluation

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

- PV : both parents have been verified by DNA
- SV : the sire has been verified by DNA
- DV : the dam has been verified by DNA
- # : DNA verification has not been conducted
- E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

BUYERS OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its database and disclosing that information to its members on its website.

I, the buyer of animals with the following idents.....

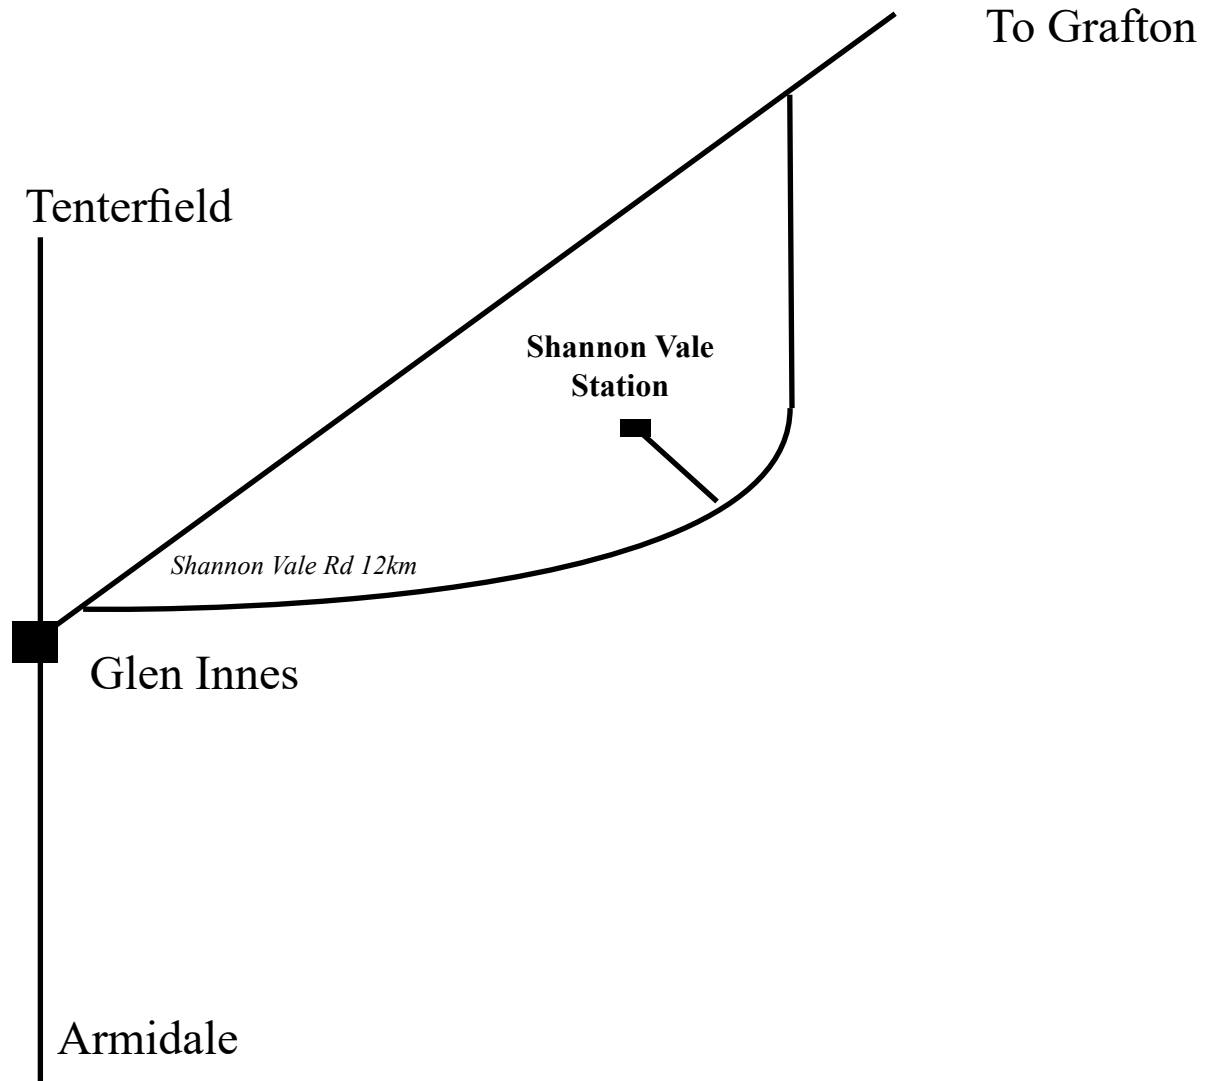

from member.....(name) do not consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the animals I have mentioned above that I have purchased, maintaining its database and disclosing that information to its members on its website.

Name: Signature:
 Date:

Please forward this completed consent form to Angus Australia, 86 Glen Innes Road, Armidale NSW 2350.

If you have any questions or queries regarding any of the above, please contact Angus Australia on (02) 6773 4600 or email office@angusaustralia.com.au

Sale Location:***Directions:***

Shannon Vale Station is situated 12kms east of Glen Innes on the Shannon Vale Road. At KFC turn east onto the Grafton Road. At the top of the hill turn right onto the Shannon Vale Road approx 12kms to Shannon Vale Station.

Accommodation

New England Motor Lodge, New England Highway (02) 67322922

Central Motel, 131 Meade St, Glen Innes 02) 6732 2200

Rest Point Motel, New England Highway (02) 67322255

Airport

Daily flights to Armidale are available. If you require transport from airport please contact Colin Say & Co Glen Innes on 02 67321266 or Greg & Sally Chappell on 0427298527

*Thank you for attending our
2022 Dulverton Angus Bull Sale
We wish everyone a safe journey home.
Greg & Sally*
